DIOSA WOMEN'S CLINIC

CONCEPT BOARD

With a name that translates to "goddess," Diosa strives to celebrate all aspects of womanhood in its services and design. The luxury women's health clinic's goal is to fulfill all sex-specific health needs of women while cultivating a supportive, confident community within its walls that spreads into the rest of the world.

The circulation plan of the clinic implements wayfinding elements as well as efficiency for staff and patients. A priority for the clinic is maintaining patient privacy, which is achieved by providing separate access for office workers and careful design of exam rooms, including furniture placement and acoustical elements. The common areas will work to encourage community between patients as well as between patients and their families who may accompany them. In celebrating womanhood with accents of bright, feminine colors, these main areas will be welcoming to everyone and create an exciting environment to be in.

Patient exam rooms are designed to be a comfortable environment for patients during their visits. Each exam room either contains its own restroom/changing room or shares one with an adjoining room to preserve patient privacy.

The break room serves as both a dining and lounge space for all employees of the clinic. It is equipped with a full kitchen and movable seating options to lend greater versatility.

DIOSA WOMEN'S CLINIC

R F S I D F N T I A I I O F T

The goal of this project is to create a contemporary-styled loft living unit for one or two people that maximizes the use of a small area while keeping a balance of private and public space. Organic colors, natural light, and indoor plant life help minimize the division between indoors and outdoors and connect the resident to the outside world.

I F W I S H O M F

This residence was designed for a family local to Conway, Arkansas. The design focuses on a central open-plan ideal for extended family gatherings as well as clear division between the kids' and parent's side of the home. Drawing from a farmhouse style, the design will incorporate contemporary elements to modernize the space while tying it to its roots in rural Arkansas.

CONTAINER HOME

This home was designed for an underclassman project in an exploration of space utilization. The goal of this shipping container home is to create a family-focused place of rest that maximizes the utility of a small space. the containers are sliced and fused together in a way that lends the home extra square footage and provides a living

room space. Built-in storage features are implemented in the kitchen and bedrooms, and ceilings are sloped at 30° to give extra space for lofted beds and to accomodate solar panels on the roof.

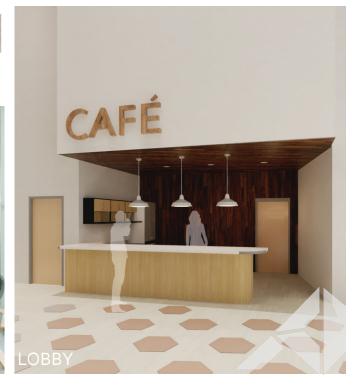

EL CENTRO DE DISCIPULADO

El Centro de Discipulado, or "Center of Discipleship," is a church plant for the Hispanic community of southwest Little Rock. Based out of Geyer Springs Baptist Church, the goals of El Centro is for community outreach, discipleship, and growth. From providing counseling and English classes to hosting food pantry giveaways and community fellowship events, El Centro's purpose is to be in the community and for the community. This worship facility enables them to do so in a space that incorporates the congregation's values, reflects cultural heritage, and welcomes all who enter.

EL CENTRO DE DISCIPULADO

The floor plan of the building 8888 CHILDREN BEE is designed to provide ample open community space while still retaining a division of spaces for different functions.
